25X1

1. On the road between Bratislava and Breslav, in the area between Kutý (P 49/S 84) and the district north to the Morava River, there are a number of wells which appear to be oil wells. In this area, on the eastern side of road, there is one derrick about 100 meters from the road, a two-pole rig, and a pipe going into the ground and extending about one meter above the ground. On the end of the pipe there are a number of valves. A number of barrels can also be seen.
2. In the same area, but to the western side of the road, there are five derricks about 500 meters away.
3. About six kilometers north of Breslav, on the road to Hustopece, what appears to be one well or possibly two wells is visible about one kilometer to the east.
